

# Hi Cut Philippe Starck

Kartell presents the latest development in transparency: Hi Cut, the new polycarbonate chair designed by Philippe Starck, which offers a perfectly ergonomic seat combining elasticity and solidity. The iridescent vertical lines in the structure of the top that customises the chair creates seductive plays of light and glints. The veritable rainbow of colours of the top and the possible combinations – 18 in all – give the chair an art deco air and make it extremely eclectic and precious, adding a touch of personality and originality to its surroundings. Hi Cut is available in three different versions (transparent, black and white) to be teamed with a range of fluorescent shades (purple, red, yellow, green and orange) plus the more classic transparent and smoke grey tones. The design of the structure of the chair, moulded in a single piece, is based on contrasting curves and angles: the front legs and front part of the seat are squared, while the rear legs and back have a softer, rounded form, which reverts to the angular design in the upper backrest.
